INTRODUCTION

Child Development Accounts (CDAs) aim to build assets for postsecondary education. Unlike many asset-building programs, CDAs were explicitly conceived to be universal (every child is included) and progressive (greater support for disadvantaged children). The broad policy vision is for the federal government to automatically enroll every newborn and make a substantial initial deposit (e.g., $500 to $1,000), and provide additional subsidies for low-income children. By providing assets for postsecondary education very early in life, CDAs increase financial preparation for college and, over time, may engender a college-bound identity, thereby improving educational outcomes, including success in college (Figure 1). The ultimate goal of CDA policy includes reducing inequality by giving all children the opportunity to benefit from asset accumulation.

SEED for Oklahoma Kids (SEED OK), a rigorous research test of social policy begun in 2007, demonstrated that it is possible to implement universal, automatic, and progressive CDAs beginning at birth. Experimental evidence from SEED OK indicates that a CDA automatically opened with an initial deposit of $1,000 has financial and nonfinancial benefits for children and their families, including such positive impacts as improving mothers’ expectations for their children’s education, mothers’ mental health, and disadvantaged children’s early social–emotional development. These impacts are often due to automatic program deposits rather than parents’ saving behavior. This research has had direct impact on policy.

Four states have created statewide CDAs—Baby Scholars in Connecticut, the Harold Alfond College Challenge in Maine, College Kick Start in Nevada, and CollegeBoundbaby in Rhode Island. Each is available in every city across the state, unlike other CDAs offered throughout the country. In this policy report, we describe these CDAs to provide perspective and inform new initiatives. We begin by identifying 10 key CDA policy design elements originally modeled by the CDA in SEED OK.

---

KEY CDA POLICY DESIGN ELEMENTS

Table 1 identifies 10 key policy design elements and cross references them with the state CDAs noted above. The first four elements—universal eligibility; automatic, opt-out enrollment; initial deposits; and progressive subsidies—are essential to address inequality. Eligibility policies define who may have a CDA; with universal eligibility, no child is excluded. Enrollment policies determine how participation is initiated; with automatic, opt-out enrollment, all children are enrolled unless parents elect otherwise. Evidence indicates that, without the first three elements, the vast majority of low-income children will not have designated college savings. Without additional, progressive subsidies, the value of college savings for those low-income children who do have savings will be much lower than those for middle- and upper-income children.

Other important CDA policy elements include an at-birth start, a centralized savings plan, targeted investment options with the potential for market growth, restricted withdrawals, and exclusions of CDA deposits from public benefit eligibility calculations. An at-birth start gives deposits time to grow, offers parents time to make contributions, and maximizes the period for children to develop a college-bound identity. Using a centralized savings plan—that is, having all children in the same system, with a state or state-contracted organization responsible for accounting and recordkeeping—creates coherence and economies of scale for CDAs. Offering targeted investment options, rather than a myriad of investments, simplifies decision making at account opening. Also, age-based funds, which automatically adjust to become more conservative as the beneficiary ages, offer a “set-it-and-forget-it” feature that removes decision making over the long term. Market appreciation can add substantially to the total amount of CDA savings accumulated for the child over time. Holding CDA program funds in accounts with restricted withdrawals ensures that the money is used for approved purchases. Earmarking funds for postsecondary education may make the goal of saving for college more salient. The last element is public benefit exclusions for CDA deposits, both program and personal.

The first four elements—universal eligibility; automatic, opt-out enrollment; initial deposits; and progressive subsidies—are essential to address inequality.

most states impose an asset limit for at least one public assistance program, restricting the amount of savings a family can have and still qualify for benefits. Asset limits penalize saving, jeopardize benefits, and may make families wary of CDAs. Federal and often state governments can remove asset limits or exclude certain types of assets from limits. Exclusions for CDA deposits protect family savings and enhance the effectiveness of the CDA.

It is noteworthy that some of these policy elements are particularly powerful in combination. For example, a sizable initial deposit, at-birth start, and potential for investment growth together can produce meaningful asset accumulation over time. Then, when children and parents observe the growth of designated college savings, their belief that college is important and expected may grow stronger, which may lead to behavioral changes with positive impacts on educational engagement and achievement.

CDAs and 529 College Savings Plans

In the United States, state 529 college savings plans offer centralized administration, targeted investment options, the potential for investment growth, and restricted withdrawals. Each 529 plan offers a limited selection of investment choices and allows accounts to be opened by adult U.S. citizens (or resident aliens) or certain entities, such as 501(c)(3) organizations and state or local governments, for a child or an adult. In many states, contributions are deductible from state income taxes. Earnings grow tax-deferred and are not taxed if used for qualified postsecondary expenses at community colleges, trade and vocational schools, 4-year colleges, and other postsecondary institutions. The earnings portion of a nonqualified withdrawal is taxable and also subject to a 10% federal tax penalty.

All four of the statewide CDAs use state 529 plans. Nationwide, about 86% of all CDA accounts are built on a 529 platform, and this percentage continues to grow. Many state 529 plans have inclusive features such as low or no minimum contributions, automatic initial deposits, statewide outreach, exclusion from some public benefit calculations, and progressive savings matches to encourage participation by low- and moderate-income families. However, a 529 plan with inclusive features is not necessarily a CDA. For example, West Virginia’s 529 plan has inclusive features: It deposits $100 into accounts opened for state resident babies before their first birthday.

* This check-box approach has been called streamlined enrollment (see Clancy, Lassar, & Miller, 2009).
** The public benefit programs considered here, all means-tested, are Medicaid, the Children’s Health Insurance Program (CHIP), the Supplemental Nutrition Assistance Program (SNAP), the Low-Income Home Energy Assistance Program (LIHEAP), and Temporary Assistance to Needy Families (TANF). See State Public Benefits Exclusions table for more details. Not considered here is the Supplemental Security Income (SSI) program, which, by federal law, has a $2,000 asset limit for individuals and a $3,000 limit for couples. States have no power to revise or remove this SSI asset limit. See Beverly & Clancy (2017).

Also, the plan allows parents to open an account without making a personal deposit (there are no minimum contribution requirements), but the enrollment process is neither automatic nor facilitated. Other CDAs, such as Promise Indiana, are not currently offered statewide.

CHARACTERISTICS OF STATEWIDE CDAS

In this section, we outline the characteristics of the four statewide CDAs, all of which are long-term asset-building programs starting early in a child’s life. These characteristics are described in detail in seven subsections: 1) CDA Origins and Partnerships; 2) CDA Account Structure, Eligibility, and Enrollment; 3) CDA Initial Deposits; 4) Individual 529 Plans; 5) Savings Match Incentives; 6) State Public Benefit Exclusions for CDA Savings; and 7) CDA Communications and Account Access.

CDA Origins and Partnerships
Maine’s Harold Alfond College Challenge, the oldest statewide CDA, was created by a private foundation, the Harold Alfond Foundation (HAF). The College Challenge is administered by the...
nonprofit Alfond Scholarship Foundation (ASF) and a quasigovernmental organization, the Finance Authority of Maine (FAME), on which board the state treasurer serves. The other three CDAs were established by state legislation or administrative rule and are administered by the state treasurer’s office (Table 2).

Because the CDAs use their state college savings plans—Connecticut Higher Education Trust (CHET), NextGen College Investing Plan in Maine, SSGA Upromise 529 plan in Nevada, and CollegeBound Saver in Rhode Island—each has an important partnership with the state-contracted 529 plan program manager. Activities differ by state; however, the 529 plan program manager can be responsible for the plan marketing, website, recordkeeping, and customer service. Sometimes these responsibilities include managing the plan’s investments.

### CDA Account Structure, Eligibility, Enrollment and Data Sharing

Two important characteristics of CDA policy are eligibility and method of enrollment. Together, these characteristics determine how inclusive a CDA is. Inseparable from enrollment is account structure, which determines ownership of the CDA funds (see Table 3).

### Dual- or Single-Account Structure

Three of the four states—Maine, Nevada, and Rhode Island—have a dual-account structure, with (1) a master (or “omnibus”) 529 account for program deposits, such as initial deposits and savings matches, and (2) optional, individual accounts for personal savings. A master account holds program funds for all children and is typically owned by a state government or a 501(c)(3) organization, which controls withdrawals. In these three CDAs, individual 529 plan accounts are necessary if parents, grandparents, or others want to save for the child. (For simplicity, we assume individual accounts are opened by parents.)

Connecticut’s CDA, Baby Scholars, has a single-account structure. To participate in the CDA, children must open a CHET 529 account. Both Baby Scholar deposits and personal savings are owned by the family, and there are no withdrawal restrictions on either type of funds, beyond those imposed by the CHET 529 plan.

The ideal CDA account structure is a single, automatically-opened account holding deposits from all sources with program and personal deposits tracked and owned separately. Yet, this account structure is not yet attainable. In the absence of the ideal, there are very good reasons for a dual account structure. When families open

* In 2008, a pilot program was open to infants born at two hospitals in Maine; infants across the state became eligible in 2009.
** College Kick Start was piloted in 13 rural communities in 2013 and expanded to public kindergarten students statewide in 2014.
*** These are the states’ direct-sold 529 plans. In addition, all four states offer an advisor-sold plan.
and own their own account, they retain control of their own savings, which allows them to (1) choose an investment that is more or less aggressive than the state-selected option; (2) easily withdraw personal savings during a financial crisis or for other reasons; and (3) benefit from a state tax deduction.

**Eligibility and Enrollment.** Only CDAs with both universal eligibility and automatic, opt-out enrollment are fully inclusive. The use of statewide public records and partnerships between state agencies make this ideal CDA design possible. The statewide CDAs in Connecticut, Maine, and Rhode Island have universal eligibility (and an at-birth start): All state-resident newborns are eligible, and there are provisions for including newly adopted children.21 Nevada’s CDA is not universal: all public school kindergartners are eligible, but private school and homeschool students are not. Maine’s College Challenge combines universal eligibility with automatic, opt-out enrollment (using state birth records) and is therefore fully inclusive.22 Nevada College Kick Start also has opt-out enrollment: Kindergarten students at public schools are automatically enrolled, using school records. However, because private school and homeschool students are not included, the CDA does not yet have universal eligibility.

</tbody>
</table>

* Before 2014 in Maine and 2015 in Rhode Island, children were enrolled in the CDA only if parents or others opened a state 529 plan account for the children before their first birthday or within one year of adoption. Parents of adopted children still must complete an application for their children.
In Rhode Island and Connecticut, all state-resident newborns are eligible for the CDA, but families must opt in. In Rhode Island, a check box on the form required to register all births in the state triggers a streamlined, opt-in enrollment in CollegeBoundBaby. Infants participate and automatically receive a deposit when a parent checks the box and provides a signature authorizing state departments to share key data elements (including the child’s social security number [SSN]). Sharing specific, identifying information early has benefits for the state and for families, which are outlined below.

Connecticut requires parents (or others) to open an individual CHET 529 plan account for a child to participate in Baby Scholars. This is a large hurdle that substantially reduces participation and inclusion. However, CDAs can facilitate individual account-opening, which Baby Scholars does. (These efforts are described under Individual 529 Plans.) In addition, if parents open an individual CHET account, opting in to Baby Scholars is fairly straightforward. Those who fill out a paper application may check a box to opt in; those who complete an online application must submit a short supplemental online form.24

**Data Sharing.** The use of statewide public records and partnerships between state agencies is central to universal eligibility and automatic, opt-out enrollment because automatically enrolling all state-resident children efficiently requires electronic data sharing. Essential information is recorded at birth, including an infant’s SSN, which requires collaboration between hospitals and federal and state agencies.25 Key design questions are: What information will be shared with the agency that administers the CDA and how will data sharing be authorized?

Memoranda of Understanding (MOUs) between FAME and the Bureau of Vital Records in Maine and between the state treasurer’s office permit certain data sharing without parent action. In Rhode Island, parents authorize the Department of Health to provide the state treasurer’s office with information from children’s birth and health records, and the child’s SSN, when they sign the birth worksheet. (Also to authorize data sharing, parents must check a box to enroll their child in Baby Scholars).26

Sharing statewide identifying, demographic, and contact information (and securing the child’s SSN early) has three benefits to states and families:

1. **Establishing proper beneficiary identification.** A child’s SSN is not required to automatically open a 529-based CDA (the CDAs in Maine and Nevada do not do so), but obtaining this key identifier is important: Having an SSN establishes accurate identification, ensures that any individual account opened in the future for the child is properly linked to the program funds, and expedites withdrawals. The federal government provides newborns’ SSNs to each state.27 Thus, this information is available and can be shared, with proper agreements. SSNs might be shared at birth either through legislation or administrative rule that authorizes limited data sharing, or parental approval (as in Rhode Island).

2. **Facilitating future communication with families.** If CDAs obtain a parent’s mailing address, email address, and perhaps cell number (for text messaging), then CDA and 529 plan representatives may contact families to encourage individual account opening and saving (at tax time or birthdays, for example), remind families about savings matches and other incentives, and offer parenting and educational resources.

3. **Evaluating outcomes and expanding knowledge.** Certain birth record information (e.g., zip code) and demographic information (e.g., race, ethnicity, education, primary language) may be used to examine CDA participation within various demographic groups. For example, CDA staff could determine whether parents’ primary language is associated with account opening, saving, use of program funds, and more. This information about participation might identify the need for additional outreach efforts or other CDA improvements. Ultimately, having accurate demographic information for a large number of CDA participants would allow researchers to evaluate the success of CDAs for various demographic groups.

In sum, the different characteristics of the four statewide CDAs illustrate how important certain design elements are to inclusivity. Automatic enrollment combined with universal eligibility—as in Maine’s College Challenge—achieves full inclusion. Including one design element without the other does not achieve this goal. Ideally, CDAs would obtain key information through a disclosure statement at birth (similar to Rhode Island, but without a parental signature requirement) and make an initial deposit into an automatically opened account (as in Maine). These design features, in combination, would ensure that every child receives the CDA and the state
Key design questions are: What information will be shared with the agency that administers the CDA, and how will data sharing be authorized?

has information required to efficiently administer the CDA from enrollment through withdrawal. State privacy laws differ, and legislation may be required to eliminate the need for parent authorization of information sharing, but the upfront work could have important, long-term benefits.

**CDA Initial Deposits**
Initial deposits are another essential feature of CDA policy. Without them, only the most advantaged children will have designated college savings. Initial deposits also jump-start asset accumulation, especially if held in a savings vehicle with the potential for market growth. Children who receive sizable initial deposits early in life may accumulate meaningful levels of assets over time, even if their families do not save.

Moreover, initial deposits may trigger attitude and behavior changes with long-lasting impacts on academic performance and educational achievement. For example, research from the SEED OK experiment shows that an automatic CDA with a $1,000 automatic initial deposit at birth improves disadvantaged children’s social-emotional development (measured at age 4) whether or not parents opened and contributed to an Oklahoma college savings plan account. The four statewide CDAs’ initial deposits range from $50 to $500 and are automatically deposited when a child is enrolled (Table 4). Funding sources are varied. For example, Baby Scholars is funded by residual money from the defunct Connecticut Student Loan Foundation.

In Maine, Nevada, and Rhode Island, initial deposits are held in a master account and invested in age-based funds. When students are ready to use the money, initial deposits (and earnings) are sent directly to any accredited college, university, or vocational school in the country (including some foreign schools). Money must be used by the time children reach their mid-20s so that unused funds may be released for the benefit of younger children.

In Connecticut, initial deposits are held in the individual CHET account; therefore, the account owner chooses the investment and can withdraw from it at his or her discretion. That is, there are no rules about withdrawing initial deposits beyond those governing the CHET 529 plan. In Connecticut, Maine, and Rhode Island, distributions are available to students regardless of residency. Nevada is the only state that imposes a residency requirement when the funds are claimed.

**Individual 529 Plans**
As noted above, Connecticut requires children to be the beneficiary of an individually-owned CHET account to participate in the CDA. The other three states encourage but do not require families to open individual 529 plan accounts for children. Table 5 summarizes characteristics of the individual 529 plans available in these four states.

Nationwide, very few low- and moderate-income families participate in a 529 plan; several barriers discourage their participation. For example, many cannot afford to save for future college expenses, but even those who can may be unfamiliar with 529 plans or may not understand the investment options. The tax benefits of 529 plans—tax-free growth and any state income tax deduction or credit—may not provide financial assistance to low-income families who often have little or no federal income tax liability. Therefore, the tax benefits do not incentivize—or subsidize—participation by low-income families. However, the 529 plans in Connecticut, Maine, Nevada, and Rhode Island have elements designed to facilitate enrollment and support saving and asset accumulation by low- and moderate-income families.

As is typical across the country, all four states 529 plans have online account-opening forms that typically ask a few questions per page, presumably making them less daunting than paper forms, which are also available. All four plans also offer age-based funds that appeal broadly to those with little investment experience or time to monitor the investments. Moreover, each has a principal-plus-interest option, for those families with low tolerance for risk.

Default investment options—allowing individuals to open a 529 account without selecting an investment—can simplify enrollment and could

* These requirements are for CDA initial deposits only.

be especially helpful to those with limited financial knowledge. In Maine, parents of children in the College Challenge can open a NextGen account without making an investment choice, and funds are automatically invested in an age-based fund. However, this option is available only to prospective account owners who complete a paper form; those who open accounts online must choose an investment.

Contribution requirements deter low-income families from participating in 529 plans, so having no or low contribution minimums is an important feature to promote inclusivity. The 529 plans in these four states have taken steps to reduce this financial barrier to account opening. In Maine and Connecticut, parents of children enrolled in the CDAs can open a 529 plan account with no initial contribution. The Rhode Island CollegeBound Saver plan reduced its minimum initial contribution requirement from $250 to $25 and then set the minimum to zero, allowing all account owners to decide how little or much to contribute. The minimum initial contribution in Nevada’s SSGA Upromise 529 plan is $15, below the national median of $25.

Though all 529 plans allow families to make deposits by check, electronic transfer, or payroll deduction, low-income families may not have the necessary accounts to write a check or make a transfer and they may not work for employers who offer payroll deduction. An innovation introduced in California in late 2016 makes cash and credit card deposits possible if families purchase “Gift of College” cards at certain retail stores and redeem them via a transfer to a new or existing 529 plan. This option is now available nationwide. Though intended to facilitate gifting by friends and extended family members, this offering allows unbanked families to make cash deposits into 529 plan accounts.

The primary way 529 plans facilitate gift deposits is by inviting people to encourage others to contribute to their college savings accounts in lieu of traditional gifts. Plans often highlight electronic gifting options at certain times of the year and for special occasions (e.g., graduation,

** Cash and credit card deposits are possible only if families purchase “Gift of College” cards at Toys R Us and Babies R Us stores nationwide (or via credit card online) and redeem them through a transfer to a new or existing 529 plan. See https://giftofcollege.com. Though intended to facilitate gifting by friends and extended family members, this late 2016 innovation also allows unbanked families to make cash deposits into 529 plan accounts.
winter holidays, birthdays). The 529 plans in Connecticut, Nevada, and Rhode Island allow families to create and send invitations from the plan website. Nevada and Rhode Island further facilitate gift contributions by allowing them to send invitations through social media and by providing unique codes that eliminate the need to disclose account numbers or any other identifying information.41

These are features offered by 529 plans to encourage participation by families throughout the state. In addition, the four state CDAs take steps to encourage parents to open and save in their own 529 plan accounts. Maine, Nevada, and Rhode Island—the states that do not require individual 529 plan accounts—send materials encouraging account opening to parents of children in the CDAs. Nevada goes a step further for parents who attend a College Kick Start event, providing some basic information, and express interest in opening an individual account: College Kick Start representatives use the parent-provided information to prefill an online 529 account-opening form and then email a unique web link to this partially complete form. There is potential for other CDAs to prefill individual 529 account-opening forms using birth record information.

In Connecticut, facilitating individual account opening is particularly important because CDA participation requires individual accounts. As of 2016, when new parents receive a birth certificate application, they also receive a letter from the state treasurer describing Baby Scholars. By checking a box and returning this letter to the hospital’s birth registrar, they give the state permission to release their contact information to the CHET 529 plan program manager. A CHET representative then contacts parents, offers help with account opening, and tracks whether or not accounts have been opened.42 In addition, at most hospitals, volunteers with a nonprofit organization promoting early childhood literacy talk face-to-face with new parents about Baby Scholars.

**Savings Match Incentives**

To incentivize saving, some state 529 plans match deposits for state residents, but these incentives are not always progressive. They are rarely automatic: Most state 529 plans with a match require families to complete a separate match application, and when the match is progressive, states typically require families to supply tax returns each year. These requirements likely greatly reduce participation, particularly by families with less financial knowledge. (Note that 401(k) owners are not required to apply annually for match money.)

Three of the four statewide CDAs have an associated savings match (Table 6). The match in Connecticut is part of Baby Scholars, and only the accounts of children enrolled in the CDA are eligible. The matches in Maine and Nevada are part of the state 529 plan and are therefore available to all state resident 529 account owners, not just children in the CDAs.

None are both progressive and automatic. Nevada’s savings match is progressive—only children in households with income below $75,000 are eligible—but families must submit a match application and federal income tax return each year.43 Maine’s NextGen match was formerly progressive, but the plan removed income thresholds in 2011 to eliminate the paper match application.44 Match funds are now available to state residents of all income levels and are automatically deposited (no application is necessary). The automatically deposited match in Connecticut is available to Baby Scholars participants of all income levels.

The terms of the savings match vary widely across the three states. To receive the maximum match of $150, families in Connecticut must save $150 in the first 4 years. Families in Nevada receive the maximum match of $1,500 if they save $300 in each of 5 years. In Maine, accounts must receive at least $50 in deposits in a calendar year to trigger the automatic 0.5-to-1 match. There is no lifetime maximum; families maximize the benefit by saving $600 every year.

Maine holds match funds in a principle-plus-interest portfolio in a single, master account for all savings match recipients, and account owners must certify that withdrawals are used for qualified higher education expenses.45 Nevada holds funds in a restricted subaccount linked to the individual account. Funds are sent directly to the institute of higher education and must be used by the child’s 26th birthday. Connecticut deposits matches into individual accounts, and there are no rules about withdrawals beyond those governing the CHET 529 plan.

Ideal savings match incentives are both automatic and progressive, but income requirements can make an automatic match more difficult to administer. The Louisiana 529 plan models a match that is both progressive and automatic—and therefore maximizes inclusion. This 529 plan uses state tax records to automatically calculate and deposit a progressive annual match. Families do not have to apply for the match and can open an account with as little as $10.46

Progressive and automatic savings match incentives have some potential to incentivize and subsidize

*Until 2011, parents had to meet income guidelines to qualify for the match.
**The NextGen 529 plans have a large number of out-of-state account owners. Some fees from these accounts fund the savings match available to in-state NextGen account owners.
*** Ascensus College Savings agreed to fund the match program as part of their contract with the state to manage the 529 plan.
**** These requirements are for match deposits only. (Withdrawals of personal savings are subject to 529 plan rules. For example, by federal law, the earnings portion of a nonqualified 529 withdrawal is taxable and subject to an additional 10% federal tax penalty.)
saving by low-income families. Yet, it is likely that substantial, automatic initial deposits and targeted milestone deposits will have a much larger impact on asset accumulation than a savings match.47

**State Public Benefit Exclusions for CDA Savings**

Because families do not own the savings, CDA deposits held in master accounts have no impact on their eligibility for means-tested public assistance. But CDA deposits held in accounts owned by individuals may affect assistance. It is important for CDA proponents to determine the impact of CDA savings held in individual accounts on public assistance and identify opportunities to reform asset limits. Modifying federal legislation is ideal because changes apply nationwide. The federal government took important steps in this direction by (1) excluding 529 savings when determining eligibility for the Supplemental Nutrition Assistance Program (SNAP, formerly Food Stamps), and (2) abolishing asset limits for parents and children in Medicaid and the Children’s Health Insurance Program (CHIP).

States can also act. Twenty-three states and the District of Columbia (DC) have either eliminated asset limits or excluded 529 savings from asset limits for their Temporary Assistance for Needy Families (TANF) programs, and 41 states and DC have done so for the Low-Income Home Energy Assistance Program (LIHEAP).48

Table 7 shows whether CDA savings in individual 529 plans are excluded from public assistance eligibility calculations in the four states with statewide CDAs. Because of the federal statutes just described, such savings have no impact on Medicaid, CHIP, and SNAP benefits. In Connecticut, these accounts have no impact on LIHEAP and TANF benefits because the state excludes 529 savings from those asset tests. Maine, Nevada, and Rhode Island have abolished asset limits for LIHEAP but not for TANF. Nevada excludes 529 savings from the TANF asset limit, but Maine and Rhode Island do not. Thus, across these four CDAs, the only instances when savings in individual accounts are not excluded from state means-tested public assistance eligibility calculations are in the TANF programs in Maine and Rhode Island.49

**CDA Communications and Account Access**

Communication between CDAs and families may increase the impact of CDAs on educational outcomes. Account statements—which may be distributed by the 529 plan program manager or the CDA—are a basic but important form of communication. By nature, account statements remind families about the presence of designated college savings for the child. And account statements may include messages about the importance of college and saving for college, reminders about available savings incentives, and provide age-based education tips. These messages and reminders may shape the attitudes and behaviors of family members in ways that increase children’s academic and financial preparation for college.50 To allow families to see the total value of CDA savings for their child, it is desirable to display transactions and savings balances.

for program and personal deposits together. Communication by mail is costly, so most 529 plans and CDAs encourage electronic delivery of account statements and other materials.

Most 529 plans and many CDAs offer online account access, which allows families to view balances any time. Also through online access, families with checking, savings, or other investment accounts may save via electronic transfer. CDAs sometimes send other communications to educate families and promote engagement. These materials might include postcards, newsletters, calendars, and age-appropriate books. Most 529 plans and some CDAs have web portals with college- and career-planning information, savings calculators, and other resources.

Table 8 summarizes CDA communications and account access for the four statewide CDAs. As is true nationwide, in all four states, families with individual 529 plan accounts receive quarterly 529 account statements that show personal deposits. Through collaboration between 529 plans and CDAs, these statements often show program deposits as well. Sometimes families must link their individual 529 account to their CDA account to view deposits from all sources on one statement. For families who have not made personal deposits, statements must come from the CDA (and will show the value of program deposits only). Families in Maine receive quarterly statements from the College Challenge, and families in Nevada receive occasional Kick Start statements. The CDA in Rhode Island does not send paper statements, yet all four states allow families to view program and personal deposits and account balances online (Nevada’s CDA requires parents to first register their Kick Start account). In Maine, other communications and resources include electronic newsletters and online parenting resources.

College Challenge quarterly statements include age-related tips for parents across four content areas: literacy, science and math, health and wellness, and financial literacy.

**EVOLUTION AND PROGRESS IN THE STATES**

As discussed above, together, the four statewide CDAs described in this publication provide almost all of the key design elements. Maine’s College Challenge stands as a shining example, modeling eight of the 10. Of particular note, the

The 10 design elements identified in this policy report highlight the value of partnerships between CDAs and state 529 plans.

College Challenge automatically enrolls all state resident newborns and automatically provides a $500 grant, and the state 529 plan automatically matches limited personal contributions. Yet there are opportunities for improvement. Maine’s 529 plan provides up to a $300 match for all state residents, regardless of household income, so the match is not progressive. A progressive subsidy would direct more funds to families in need. It is also possible to implement a state policy protecting personal savings in Maine’s 529 plan from TANF eligibility calculations (although the initial $500 grant is excluded).

It is noteworthy that the statewide CDAs are evolving. Policy changes have made the CDAs more accessible, efficient, and inclusive. The most striking change occurred in 2014, when the College Challenge began enrolling newborns automatically. Another important example is Rhode Island’s 2015 action to streamline enrollment in CollegeBoundbaby and authorize data sharing at birth. Together, automatic enrollment and authorized release of certain birth record information, including the child’s SSN, could be an ideal CDA design combination.

By modeling key design elements, the statewide CDAs have made significant advancements toward an efficient, sustainable, and fully inclusive CDA policy that reaches all children nationwide.

The 10 design elements identified in this policy report (see Table 1) highlight the value of partnerships between CDAs and state 529 plans. For example, because 529 plans are centralized and statewide, a single financial provider (the state-contracted 529 program manager) can cover all children in the state, facilitating universal eligibility. Because 529 plans are overseen by states (typically the treasurer’s office), collaboration between state agencies is fostered, which simplifies automatic enrollment, automatic deposits, and an at-birth start.

(Executed agreements between FAME, which administers the state 529 plan, and the Registry of Vital Records and Statistics makes possible at-birth, automatic enrollment and deposits in Maine’s College Challenge.) Targeted investments (that offer the potential for investment growth) and withdrawals restricted for postsecondary education are fundamental features of state 529 plans. Some 529 plans provide a progressive savings match, which means that CDA staff do not have to expend developmental, administrative, and political effort to create such a subsidy. Finally, some states have public benefit exclusions for 529 savings.

Reciprocal influence of CDAs on 529 plans is another example of evolution in the field: CDAs can shape 529 plans in ways that make them more inclusive—to potentially benefit all low-income families, not just those with children in CDAs. For example, Rhode Island’s 529 plan reduced its minimum initial contribution from $250 to $25 and ultimately eliminated it altogether when researchers advised stakeholders that initial contributions likely deterred 529 and CDA participation by low-income families.

New statewide CDAs using 529 plans are being contemplated. The Vermont state legislature voted in 2015 to create a statewide CDA built on their 529 plan. Pennsylvania’s newly elected state treasurer has proposed automatic college or vocational-training accounts for every child born in the state, using the 529 plan. And Promise Indiana, a 529-based CDA that exists in some counties intends to expand statewide.

By modeling key design elements, forging partnerships, and resolving challenges, the statewide CDAs have made significant advancements toward an efficient, sustainable, and fully inclusive CDA policy that reaches all children nationwide.

Because of the statewide CDAs in Connecticut, Maine, Nevada, and Rhode Island, thousands of children have accounts and assets designated for postsecondary education, a remarkable accomplishment. New and expanded CDAs will provide savings for many more children. As we have noted elsewhere, “states have served a historic role as ‘laboratories for democracy,’ very often creating social policy models that are later adopted as national policy.” If in the future the federal government funds a national policy, it will undoubtedly be informed by and perhaps modeled after the statewide CDAs.

By modeling key design elements, forging partnerships, and resolving challenges, the statewide CDAs have made significant advancements toward an efficient, sustainable, and fully inclusive CDA policy that reaches all children nationwide. The great potential is that, through CDAs, the United States can transform an exclusive, regressive 529 college savings plan platform into an inclusive, progressive asset-building policy.
ENDNOTES

1. CDAs were first proposed in Sherraden (1991). See also Sherraden (2014). The policy vision has always been lifelong, universal accounts. Universal policies often have more political support and thus greater political sustainability than targeted policies (see Sherraden et al., 2016).

2. See, for example, Beverly, Elliott, & Sherraden (2013); Elliott, Choi, Destin, & Kim (2011); and Oyserman (2013).

3. See Beverly, Kim, Sherraden, Nam, & Clancy (2015) and Nam, Kim, Clancy, Zager, & Sherraden (2013). Although SEED OK is not a statewide policy, the sampling frame consisted of birth records for all children born in Oklahoma during certain periods in 2007, and the SEED OK CDA was the first in the United States to model all of the design elements identified in Table 1.

6. See Clancy, Sherraden, & Beverly (2015). Age-based funds shift assets from more aggressive to more conservative investments as children age. They are the most popular 529 investment choice (Acheson, 2017; Clancy & Jovanovich, 2009; U.S. Department of the Treasury, 2009.)

7. Investment growth for the SEED OK 529 assets (invested in late 2007 or early 2008) has been substantial. In 2014, the median value of earnings on the initial $1,000 seed was $426 for treatment children. At that time, investment earnings represented about 30% of the total $1,426 in college assets, despite the Great Recession (Clancy, Beverly, Sherraden, & Huang, 2016). After about 9 years, the $1,000 initial SEED OK deposit had increased by more than 60% (July 6, 2017 communication with Oklahoma State Treasurer’s office).

8. Personal communications with Prosperity Now! (formerly CFED), October, 19, 2016. Of note, Pennsylvania’s state treasurer has proposed automatic college or vocational-training accounts for every child born in the state, and these accounts would be built on the state 529 plan (Platt, 2016).

9. For more information on Maine’s CDA program, see Clancy & Lassar (2010); Clancy & Sherraden (2014); Huang, Beverly, Clancy, Lassar, & Sherraden (2013); and www.500forbaby.org. For information on Connecticut’s program, see www.promiseindiana.org. In addition to Promise Indiana, other noteworthy regional CDAs include College Kids in St. Louis and San Francisco Kindergarten to College, and in-development initiatives in New York City and Oakland, California.

11. For more on the importance of choosing a vehicle with the potential for investment growth, see Beverly, Clancy, Huang, & Sherraden (2015); Clancy, Beverly, Sherraden, & Huang (2016); and Clancy, Sherraden, & Beverly (2015). For more on the possible links between CDAs and college success, see Beverly, Elliott, & Sherraden (2013).

12. Thirty-four states and the District of Columbia offer a state tax deduction or credit for 529 contributions. See www.savingforcollege.com, compare 529 plans.

13. Qualified education expenses include tuition, fees, and books at any college, university, or vocational school that is eligible to participate in a U.S. Department of Education student aid program. Computer purchases and related expenses are covered, with certain restrictions. Room and board is also a qualified expense for students enrolled at least half-time. See www.irs.gov/publications/p970/ch08.html. State 529 plan administrators report withdrawals to the Internal Revenue Service.

14. For more about SMART529, West Virginia’s College Saving Plan, and the Bright Babies program, see www.smart529.com/cs/Satellite?pagename=College_Savings/Page/CS_CommonPage&cid=1287794310134.

15. For more on the importance of choosing a vehicle with the potential for investment growth, see Beverly, Clancy, Huang, & Sherraden (2015); Clancy, Beverly, Sherraden, & Huang (2016); and Clancy, Sherraden, & Beverly (2015). For more on the possible links between CDAs and college success, see Beverly, Elliott, & Sherraden (2013).

16. Thirty-four states and the District of Columbia offer a state tax deduction or credit for 529 contributions. See www.savingforcollege.com, compare 529 plans.

17. Qualified education expenses include tuition, fees, and books at any college, university, or vocational school that is eligible to participate in a U.S. Department of Education student aid program. Computer purchases and related expenses are covered, with certain restrictions. Room and board is also a qualified expense for students enrolled at least half-time. See www.irs.gov/publications/p970/ch08.html. State 529 plan administrators report withdrawals to the Internal Revenue Service.

18. For more information on Maine’s CDA program, see Clancy & Lassar (2010); Clancy & Sherraden (2014); Huang, Beverly, Clancy, Lassar, & Sherraden (2013); and www.500forbaby.org. For information on Connecticut’s program, see www.promiseindiana.org. In addition to Promise Indiana, other noteworthy regional CDAs include College Kids in St. Louis and San Francisco Kindergarten to College, and in-development initiatives in New York City and Oakland, California.

19. Although most 529 plan accounts are opened by parents, it is not unusual for grandparents to open accounts, and many states market to grandparents as well as parents.

20. See Nam et al. (2013).

21. For example, babies who become Maine residents by adoption and babies who are born...
out of state but move to Maine are eligible for the grant if a NextGen account is opened for them by their first birthday. In addition, babies who are born out of state to Maine resident mothers (e.g., babies of Maine resident mothers serving in the military) are also eligible for the grant, whether or not they are beneficiaries of an individual NextGen account. Parents do, however, need to provide information establishing eligibility.

22. Children automatically receive the College Challenge grant if named on a state birth record. As the previous note indicates, enrollment is not fully automatic under certain circumstances (Clancy & Sherraden, 2014).

23. See Clancy, Lassar, & Miller (2009), which examines innovations in streamlined enrollment and default investment in Alaska’s college savings plan.

24. Although this check box approach may seem similar to the check-box approach in Rhode Island, the differences are substantial. In Rhode Island, all parents have access to the check box because it is on the birth worksheet, and parents do not have to do anything to opt in to the CDA other than check the box and provide a signature. In Connecticut, parents must open an individual CHET account and only parents in this self-selected group are presented the opt-in check box.

25. About 96% of SSNs for infants are assigned when parents complete applications as part of the hospital birth registration process. Hospitals collect data and send it to their state vital records agency, which then electronically transmits the information to the Social Security Administration, which then issues a Social Security card. See https://secure.ssa.gov/poms.nsf/lnx/0110205505.

26. The Mother’s Worksheet for Child’s Birth Certificate reads as follows: “I authorize the Rhode Island Department of Health to provide the Rhode Island General Treasurer with information and to provide updated information from my child’s birth and health record, including my child’s social security number, for the sole purpose of awarding the $100 CollegeBoundbaby grant and communicating with me about the grant.” The CollegeBoundbaby website states “All confidential information collected will be used exclusively to establish the CollegeBoundbaby Grant and for purposes of communication about CollegeBoundbaby, CollegeBound Saver and CollegeBound 529, and other age-appropriate tips. Confidential information will not be shared with additional parties” (see www.collegeboundsaver.com/cbb/q--a.html).

27. The states use information from SSN applications to administer and evaluate public health and income maintenance programs, such as the Women, Infants and Children nutrition program, “Healthy Start,” and other health maintenance programs (see www.ssa.gov/legislation/EAB.pdf).

29. Through market growth, the SEED OK CDA automatic initial deposit in the Oklahoma 529 plan was valued at about $1,620 on June 30, 2017. This is the case even if the account received no deposit other than the initial $1,000 seed (July 6, 2017 communication with Oklahoma State Treasurer’s office).

31. See Huang, Sherraden, Kim, & Clancy (2014). SEED OK uses a rigorous research design with probability sampling from a full state population and random assignment to CDA and non-CDA groups.

32. Having a deadline for the use of funds is different than having an automatic deposit expire if parents do not “claim” it soon after it is granted. The ultimate policy vision is for CDAs to be automatic and lifelong so that funds may be used for different purposes throughout the life course (see Sherraden, 1991; 2014). Even under the current policy design, when CDAs are designated for postsecondary education, allowing automatic deposits to expire before the child has had the opportunity to use the funds for that purpose is counterproductive. Parents may become more interested in saving for college as children age. With market growth, automatic CDA deposits will likely appreciate, and this increase in value may attract parents’ attention. In short, parents and children may engage with CDAs more over time.

34. See Dynarski (2004), Government Accountability Office (2012), and U.S. Department of the Treasury (2009). Of note, high-income families have relatively high rates of participation in 529 plans, often hold accounts with sizable balances, and receive large tax benefits; therefore, as a group, high-income families receive substantial public subsidies for saving in 529 plans.

35. Principal-plus-interest options, also known as interest accumulation options, aim to preserve principal and avoid market volatility.

37. The Center for Social Development
recommended that Rhode Island greatly reduce the minimum initial 529 plan contribution for state residents and streamline enrollment in CollegeBoundbaby (see Center for Social Development [2014]). Since 2004, when Nebraska had the only 529 plan with no minimum initial contribution (Clancy, Orszag, & Sherraden, 2004), seven more states have set their minimum initial contribution to zero and others have significantly reduced their minimums (see www.startsavingla.gov). 38. See Clancy, Lassar, & Taake (2010) and Clancy, Sherraden, & Beverly (2015). 39. Gift of College cards may be purchased by cash or credit card at Toys R Us and Babies R Us stores. Also, families may buy the cards online and elect to receive them by email, mobile device, or mail. Card purchasers incur charges for this service (see www.scholarshare.com/tools/gift/index2.shtml and www.scholarshare.com/buzz/?id=540). 40. The Federal Deposit Insurance Corporation estimates that 9 million households in the United States (7%) do not have an account at an insured institution, or are “unbanked” (see www.fdic.gov/householdsurvey). 41. Nevada and Rhode Island use Ugift (see www.ugift529.com). Connecticut uses eGift (see www.aboutchet.com/gift/contributions.shtml) There is no charge to families for either service. 42. Connecticut intends to move the check box from a separate letter to the birth worksheet. This will likely increase the number of people releasing contact information to CHET, which may in turn increase account opening. 43. Nevada’s program also has age requirements. 44. See Clancy, Han, Mason, & Sherraden (2006) and Lassar, Clancy, & McClure (2011). 45. The savings match in Maine is funded by FAME, while the initial deposit is funded by ASF. Therefore, savings match funds and initial deposits are held in separate master accounts. But families see both types of incentives (and earnings) on quarterly account statements and through the on-line platform for NextGen (see Clancy & Sherraden [2014]). 46. The Louisiana START Saving 529 “earnings enhancement” ranges from 2% to 14%, with the lowest-income families receiving the largest match (see www.startsaving.la.gov/savings/index.jsp). Specific language on the START 529 account-opening form authorizes Louisiana to access state and federal income tax returns to verify federal adjusted gross income to determine eligibility for earnings enhancements (see www.startsaving.la.gov/savings/pdf/enrollidn.pdf). Lassar, Clancy, & McClure (2011) discuss this process in Louisiana specifically and other savings match programs associated with 529 plans across the country. A progressive, automatic savings match was also modeled in the SEED OK experiment (see Nam et al. [2013] and Zager et al. [2010]). 47. Because matches are available only to those who can save for college, they have only limited ability to impact the most vulnerable families (see Beverly, Clancy, Huang, & Sherraden [2015]). 48. For details about the impact of CDA savings on public assistance and opportunities for state policy reform, see Beverly & Clancy (2017). Asset limits may be modified by passing legislation or changing administrative rules. One model for state policy change comes from work by the Center for Social Development to reform asset limits in Oklahoma before implementing the SEED OK experiment (see Mason, Clancy, & Lo, 2008). Other publications related to state-level asset-limit reform include Corporation for Enterprise Development (2014); Lassar, Clancy, & McClure (2010); and Rand (2007). 49. See Beverly & Clancy (2017). Not considered here is the Supplemental Security Income (SSI) program, which, by federal law, has a $2,000 asset limit for individuals and a $3,000 limit for couples. SSI is funded and administered solely by the federal government, and states have no power to revise or remove this asset limit. In addition to means-tested public assistance, another important resource for low-income families is need-based college financial aid. Personal CDA deposits in individual accounts are very unlikely to affect need-based aid for most dependent students. When assets count, savings in 529s have less impact on need-based aid than savings in basic savings accounts (Clancy & Beverly, 2017). 50. See Beverly, Elliott, & Sherraden (2013); Gray et al. (2012), and Karlan, McConnell, Mullainathan, & Zinman (2010). 51. The Center for Social Development provides examples of materials sent to families in the SEED OK experiment (see www.csd.wustl.edu/OurWork/FinIncl/InclAssetBuild/SEEDOK/Pages/SEEDOKMgmtComm.aspx). 52. See, for example, https://www.500forbaby.org/parent-resources and www.MyAlfondGrant.org. 53. Clancy & Sherraden (2014) show a sample quarterly College Challenge statement (with age-based education tips and encouragement to save). 54. See Clancy & Sherraden (2014). 55. See Center for Social Development (2014). 56. VTDigger (2015). 57. See Platt (2016). 58. Clancy, Sherraden, & Beverly (2015), p. 2.
