

Formosa 1140

case study
By Qian Huang

Location: West Hollywood, California, USA

Architect: LOHA Architects

Owner: Habitat Group Los Angeles, LLC

Building Type: Residential

Year of completion: 2008

Latitude: 34.090009

Longitude: -118.361744

Climate: mediterranean

Material of interest: Corrugated metal

Application: facades

Properties of material: The careful placement of outer skin panels and inner skin fenestration creates a choreographed effect, both revealing and concealing, while achieving a unique expression of form and materials. The exterior skin also keeps west facing units cooler by acting as a screen and shading device.
