

Archi-Union Architects Office

case study
By Emily Rosa

Jungong Road, Shanghai, China

Architect: Archi-Union Architects

Owner: Archi-Union Architects

Year of completion: 2009-2010

Climate: Humid Subtropical Climate

Material of interest: Concrete Blocks

Application: Exterior

Properties of material: The wall undulates to reference the building's former use, a silk warehouse. The concrete blocks are angled to create an interesting texture and allow varying levels of light into the interior space. This firm is interested in low-tech digital fabrication methods, and this example allows for a unique surface using a material that is widely available.
