

Bluetube Bar

case study
By Hua Yinghua

Porto, Portugal

Architect: DOSE

Owner: Ae FAUP

Year of completion: 2010

Climate: Mediterranean Climate

Material of interest: Plastic

Application: whole structure

Properties of material: When applying the TUBE-IT system, the chosen main material - corrugated tube - is rolled up around a given existing structure in a helicoid manner. In addition to its structural purpose - i. e. to attach the different tube layers to each other as well as to the structure itself - the plastic clamps enhance the desired visual impact of the whole. This kind of tube, usually used in construction with an infrastructural role, becomes the design's primary element.
