

Delft City Hall and Train Station

case study
By Tian Lan

Location: Delft, Netherlands

Architect: Mecanoo

Owner: N/A

Year of completion: 2018

Climate: Marine West Coast Climate

Material of interest: Fused Glass

Application: Exterior Façade

Properties of material: The glass skin of the building is designed to reflect the Dutch skies. The panels of fused glass with lens-like spheres reference a vernacular window design that can be seen throughout the historic city. The combination and rhythm of open panels of high performance glass and closed fused glass panels enable a high degree of energy efficiency.
