

The Gores Group Headquarters

case study
By Larissa Sattler

Location: Beverly Hills, CA, USA

Architect: Belzberg Architects

Owner: The Gores Group

Year of completion: 2014

Climate: Hot Dry Summer Climate

Material of interest: Slumped Glass Panels

Application: Exterior Facade

Properties of material: The custom slumped glass panels provide a double layered insulating façade, which also provides visual opacity and layers of filtered views. Additionally, The double layered insulating glass panels provide better climate control for the interior conditions of the building than a normal single layered glass façade.
