Church in Urubo

Location: Urubo, Bolivia

Architect: Jae Cha
Owner: N/A
Year of completion: 2000
Climate: Cold Semi-Arid Climate
Material of interest: Recycled Beer Crates, Recycled Facade
Application: Exterior

Properties of material: The simplicity of the materials created a highly flexible space that blended traditional wood with inexpensive, yet modern polycarbonate plastic panels. Additionally, the polycarbonate plastic panels create an interplay of light and shadows when the light strikes it.
