
Project_Code_2d.m

By Joshua Norlin This project code calculates the characteristic exponents of the rotor system with reversed flow for values $B=1$ and $p=1$, determines the stability of the system, and plots the results. Stable1 and Stable2 contain a true/false analysis for each characteristic exponent's stability, and Nu contains the characteristic exponent pairs. For $\gamma=0:16$, values 1:17 correspond with $\mu=0$, values 18:34 correspond with $\mu=1$, and values 35:51 correspond with $\mu=2$.
